### 1 Introduction

## 1.1 Contributing

These study materials are heavily based on professor Heuzeroth's "Anwendungssicherheit" lecture at HdM Stuttgart.

#### 1.3 Themes

Please check out Jakob's notes for more detailed study materials!

- Basics and Security Objectives (8 points)
  - CIA triad
  - Definition of security & safety
  - Definition of software security & safety
  - How do software security issues occur, and what are their causes?
  - What are risks, threats and vulnerabilities? (from the basics slides)
  - Ranking risks
  - Contradictions in software security (security vs vulernability)
- Secure Development Process (4 points): Data flow diagram (see STRIDE) and modelled system are given, analyze the secure development principles
- Buffer Overflow (10 points):
  - Screenshots from SL-Mail exploit are given, explain step by step (with parameters and tool names)
  - Include buffer overflow cheat sheet
  - Unique string search vs binary search
- Security of Web Applications (13 points):
  - OWASP Top 10 (names, explanation and example)
  - 2x: Bad example code is given, find, describe and execute possible attacks, show countermeasures
  - Attack vector is given, execute attack
  - Explain countermeasure to one of the OWASP 2021 attacks
- Secure Coding (10 points):
  - Explanation of program is given, find and fix the vulnerability
- Authentication and Authorization (5 points):
  - Authentication vs Authorization
  - Methods of authentication (knowledge, ownership or attributes)
  - What are OAuth2 refresh & access tokens?
