1.3 Themes

- Basics and Security Objectives (8 points)

    - CIA triad
    - Definition of security & safety
    - Definition of software security & safety
    - How do software security issues occur, and what are their causes?
    - What are risks, threats and vulnerabilities? (from the basics slides)
    - Ranking risks
    - Contradictions in software security (security vs vulernability)

- Secure Development Process (4 points): Data flow diagram (see STRIDE) and modelled system are given, analyze the secure development principles
- Buffer Overflow (10 points):

    - Screenshots from SL-Mail exploit are given, explain step by step (with parameters and tool names)
    - Include buffer overflow cheat sheet
    - Unique string search vs binary search

- Security of Web Applications (13 points):

    - OWASP Top 10 (names, explanation and example)
    - 2x: Bad example code is given, find, describe and execute possible attacks, show counter-measures
    - Attack vector is given, execute attack
    - Explain countermeasure to one of the OWASP 2021 attacks

- Secure Coding (10 points):

    - Explanation of program is given, find and fix the vulnerability

- Authentication and Authorization (5 points):

    - Authentication vs Authorization
    - Methods of authentication (knowledge, ownership or attributes)
    - What are OAuth2 refresh & access tokens?
